two inductor loads.

j

DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

Specie I: Figure 16A depicts claim 1, drawn a two-switch receiver according to one embodiment of the invention wherein the two switches are connected to each other via a first port of a first switch and a first port of a second switch.

Specie II: Figure 16H depicts claim 12, drawn to a two-switch receiver wherein two switches connect to two capacitors and the two capacitors are connected to

Specie III: Figure 21 depicts claim 23, drawn to one switch receiver according to one embodiment of the invention wherein one capacitor and one impedance device connected in series are connected to one switch.

Specie IV: Figure 20A depicts claim 34, drawn to a one switch receiver according to another embodiment of the invention wherein two capacitors connected via a switch and each of the two capacitors are each connected to a different load.

<u>Specie V:</u> Figure 20F depicts claim 45, drawn to a one-switch receiver according to another embodiment of the invention wherein one capacitor and one impedance device in parallel are both connected to one port of a switch.

Application/Control Number: 09/855,851

Art Unit: 2685

1

<u>Specie VI:</u> Figure 24A depicts claim 56, drawn to a two-switch transmitter including two amplifiers connected to an impedance load, the two amplifiers are each connected to two different switches.

<u>Specie VII:</u> Figure 26A depicts claim 70, drawn to four-switch transmitter according to another embodiment of the invention.

<u>Specie VIII:</u> Figure 27A depicts claim 77, drawn to a one-switch transmitter including two amplifiers connected together and each amplifier to a first and second impedance devices, a switch connect together a first impedance and a first capacitor, a second capacitor and a second impedance.

Specie IV: Figure 62 depicts claim 84, drawn to a method for receiving an RF signal and down-converting an electromagnetic signal and controlling a charging and discharging of a capacitor through a plurality of cycles via a switch by charging the capacitor when the switch is closed and discharging a certain amount of the total charge when the switch is open.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim

Application/Control Number: 09/855,851

Art Unit: 2685

is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

2. A telephone call was made to applicant's representative, Michael Lee, on 06/10/04 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

Application/Control Number: 09/855,851

Art Unit: 2685

or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by

a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Lana N Le whose telephone number is 703-308-5836.

The examiner can normally be reached on M-F 10-6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Edward Urban can be reached on (703) 305-4385. The fax phone number

for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
